

Trout Unlimited Canada's

Yellow Fish Road™ Program

Storm drains are connected directly to creeks and streams.

What goes down a storm drain ends up with the fish.

If you are concerned about this and would like to get involved contact us:

What is Yellow Fish Road™?

The Yellow Fish Road™ program is a hands-on environmental project for youth to help decrease water pollution in their communities.

In most urban areas, storm drains connect directly to the local water bodies. Anything entering a storm drain can end up in a creek, stream or lake untreated. Pollution such as litter, salt, soap or fertilizer, that runs off lawns, driveways, sidewalks and roads can end up in a storm drain.

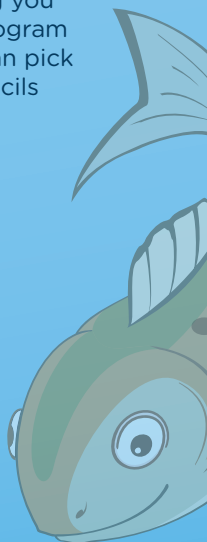

These wastes can have a negative impact on the aquatic ecosystem, possibly harming fish and wildlife.

Yellow Fish Road™ volunteers paint “yellow fish” symbols next to storm drains and distribute fish-shaped brochures to nearby households, reminding people that anything that enters the storm drain system may go directly into their local water body.

How can I get involved?

Yellow Fish Road™ is best for ages 7 and up. Everything you need will be supplied including a Yellow Fish Road™ Program Guide to help you prepare for your painting day. You can pick up complete paint kits from us, or we can mail you stencils and fish-shaped door hangers to get you started.

Presentations and other teaching aids are available.
